

"Picaso™XF will enhance the functionality of our pending SAP/APO upgrade, and can help in the short term with our existing toolset."

From the makers of Picaso™, the world's leading supply chain planning solution for the process industry, comes a powerful new combination of ease-of-use and low impact to your IT organization.

- Extends the functionality of your existing ERP & Supply Chain Planning Systems
- Fully extensible and is designed to co-exist with your migration to SAP / APO
- Our interface talks directly to SAP, APO, Picaso™, or any version of existing planning tools
- Does not overlap with functionality found in SAP / APO
- Low cost, low overhead solution that you can employ today while your company continues its upgrading initiatives

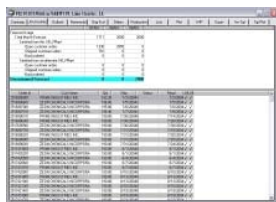

VISUALIZE YOUR SUPPLY CHAIN

- Visualization of multiple SKUs on one screen
- Production runs, orders, inventory levels, stock-outs
- Simulation of inventory and orders over time
- Customizable views by SKU, rep, family, location, ad-hoc, etc.
- Extensive drill down detail on any SKU
- "What-if" scenario planning
- Represents up-to-date inventory and order data from your ERP system
- Works with any ERP system

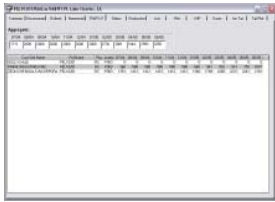

Inventory Summary

Unconsumed Inventory

Target Plot

Forecast Comparison

Status of Orders

Inventory Targets & Detail

REAL-TIME ACCESS

An intuitive **Customer Service Workstation** interface presents real-time insight into order fulfillment potential.

TRUE COLLABORATION

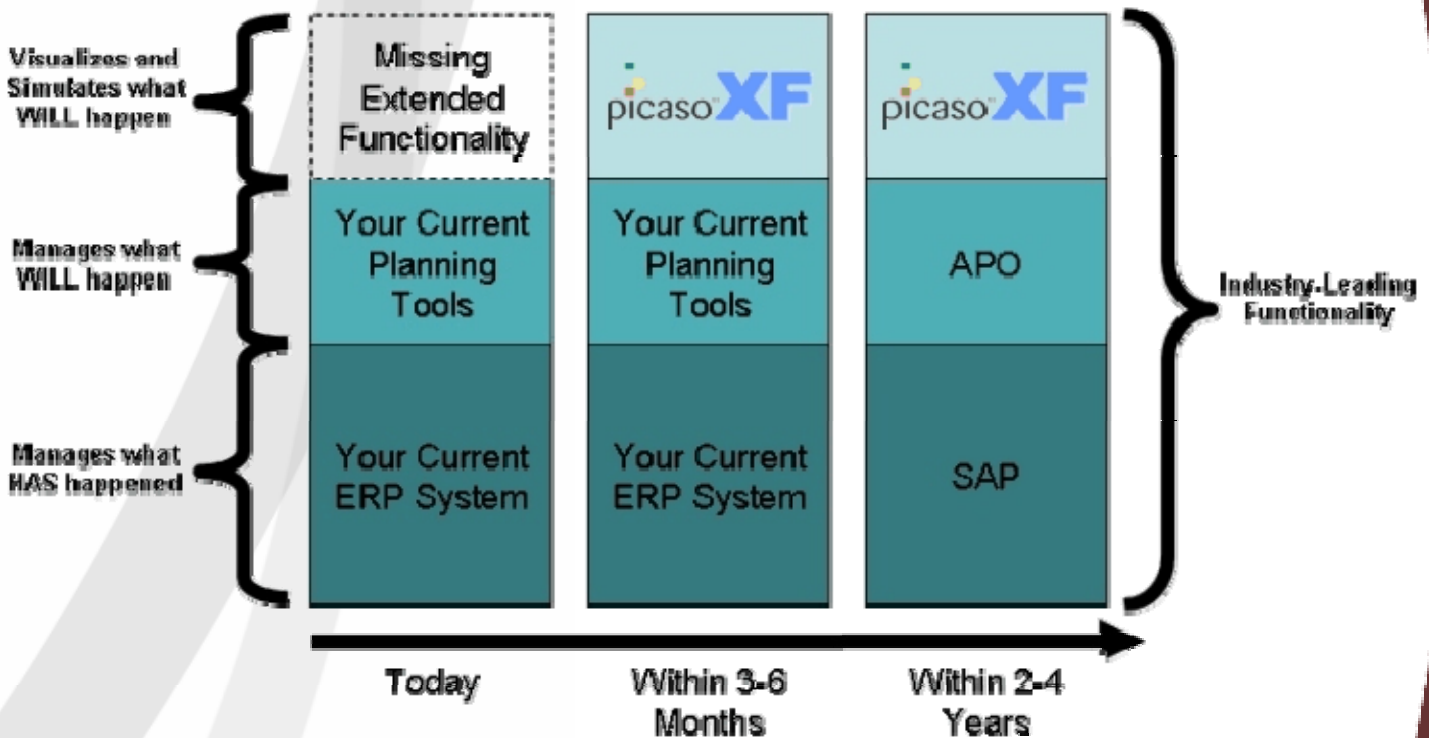

Collaborative forecasting options let every member of your team contribute online to the production schedule, month by month.

INTEGRATION

- Requires minimal commitment from your IT organization
- Deploys quickly, leveraging standard routines for interfacing
- Controls costs by minimizing configuration and customization requirements
- Ensures compatibility with leading ERP systems
- Configuration-based product suite that installs in minutes and requires absolutely no custom coding to be deployed
- Provides comprehensive built-in support for emerging plant floor standards such as ISA-95 (B2MML) and OPC, and emerging IT standards such as Web Services and Service Oriented Architectures (SOAs)
- Supports a wide array of connectivity options; HTTP/S, FTP, E-mail, JMS, File Trigger, DCOM, XML, SOAP, SQL, Flat File, SNMP, OPC, MQSeries and more

Picasso XF connects to SAP using technology with SAP® Certified Integration

Your Company's Supply Chain Systems' Initiative

Picasso™XF is designed to be able to install quickly into your existing environment and begin delivering added value to your organization while you continue on the path towards a more comprehensive system upgrade. The functionality delivered by Picasso™XF enhances the technology of SAP / APO.

Call us today for more information regarding this new technology and how it can begin helping your team today as you progress towards system-wide improvement.
