Oxea Selects Picaso For A Global Supply Chain Planning Improvement Initiative

Oxo-Chemicals Producer to Achieve High Visibility Over Planning and Production

Oxea, one of the largest suppliers of oxo-chemical products and olefin derivatives, has selected WAM Systems' Picaso™ Supply Chain Planning Solution for a three year project to strengthen global production, inventory management and operational visibility.

Building upon an existing program which rolled out forecasting to its global operations, Oxea will implement a phased installation to begin in the company's Oberhausen location, followed closely by sites in Marl, Germany, Bay City, Texas and Bishop, Texas.

Among the challenges being addressed by the project are a focus on improved sequencing of production on all batch units, a reduction in all non-optimal shipping and raw materials purchases and improved forecast accuracy.

"We look forward to the increased visibility and functionality that Picaso will provide, particularly in our short term operations," said Bob Gengelbach, Executive Board Member for Purchasing and Supply Chain. "Picaso will help us improve our operational flexibility, enabling us to more efficiently respond to disruptions with little or no impact to customer service levels or global production. Further, Picaso will extend our planning functionality while fully leveraging our existing ERP investments, critical to the organization as a whole."

improvement.

WAM Systems to Share Benchmarking Trends at Leading Supply Chain Planning Conference

Insight from hundreds of hours of interviews with supply chain planning teams in the process industry will be shared at supply chain planning conference

WAM Systems is returning for a fourth consecutive year as host of LogiChem USA. New to its agenda as host this year will be a presentation of findings from the company's ongoing benchmarking program—an interview-based analysis of the operations and best practices of supply chain planning teams from companies throughout the process industry.

Americas Styrenics LLC Selects Picaso to Extend Its Supply Chain Visibility throughout North and South American Operations

Supply Chain Visibility Solution to Provide Improved Global Visibility and Optimized Production

WAM Systems, a leading provider of supply chain planning solutions to the process industry, today announced a project with Americas Styrenics LLC to implement WAM's Picaso solution throughout installations in the U.S. as well as Latin America.

Americas Styrenics LLC, a joint venture equally owned by The Dow Chemical Company and Chevron Phillips Chemical Company LP, will use the common platform provided by Picaso to achieve global visibility to its supply chain operations. With the company's new combined assets and product slate, Picaso will serve a critical role in helping to optimize the use of production facilities and improve the product mix. In addition, Americas Styrenics LLC plans to implement Picaso's Advanced Planning (AP) functionality to support more vital network wide Sales and Operations Planning (S&OP) process as well as longer range planning.

The project, which started in July 2008, expands upon a long-time Picaso installation in the company's Marietta, Ohio facility to encompass a comprehensive network of production facilities throughout the region, including all of Dow's legacy plants.

"We look forward to extending the functionality that we're using in Marietta to our new production network. With the single-source solution provided by Picaso, we will obtain critical visibility of our new operations enabling us to utilize the combined production assets to maximum potential", said Randy Pogue, Vice President of Supply Chain, Purchasing and Information Technology for Americas Styrenics LLC.
